

DOCUMENT 1: PROBLEM VALIDATION DOCUMENT

Project: GameVerse — Esports Tournament Operations & Live Broadcast Platform

Document Type: Problem Validation

Version: 1.0

Date: June 2025

Status: Draft for Review

TABLE OF CONTENTS

1. Executive Summary
 2. Problem Statement
 3. Problem Context & Industry Background
 4. Target User Segments
 5. Detailed User Personas
 6. Pain Point Mapping by User Segment
 7. Current Workflow Analysis (As-Is State)
 8. Problem Severity & Frequency Matrix
 9. Existing Solutions & Gap Analysis
 10. Evidence of Problem Existence
 11. Problem Prioritization Framework
 12. Validation Methods & Findings
 13. Risk of Problem Non-Existence
 14. Problem-Solution Fit Hypothesis
 15. Open Questions & Next Steps
-

1. EXECUTIVE SUMMARY

The Indian mobile esports ecosystem — dominated by **BGMI, Free Fire MAX, and similar battle royale titles** — has exploded in scale over the past three years. Thousands of tournaments are organized every month by independent organizers, gaming cafés, college clubs, content creators, and emerging esports organizations.

Despite this growth, **the operational infrastructure powering these tournaments remains fundamentally broken**. The vast majority of organizers still rely on a fragmented combination of WhatsApp groups,

Google Sheets, Discord servers, manual screenshots, and ad-hoc communication to manage events that involve 100–500+ players across multiple matches, rounds, and days.

This document validates **three core operational problems** that exist at scale, recur across nearly every tournament, and cause measurable financial, reputational, and experiential damage to organizers, players, and audiences alike.

The central thesis of this validation is:

The Indian mobile esports tournament ecosystem does not lack demand or participation. It lacks **operational infrastructure**. The gap between the scale of tournaments being run and the tools available to run them is the single largest unsolved problem in this market.

2. PROBLEM STATEMENT

2.1 Primary Problem Statement

Mobile esports tournament organizers in India lack an integrated operational platform to manage the full lifecycle of battle royale tournaments — from registration and team verification through live match execution, real-time scoring, and broadcast production — forcing them to rely on manual, error-prone, and disconnected tools that break down at scale.

2.2 Sub-Problems

ID	Sub-Problem	Category
SP-1	Tournament registration, team verification, and slot management are handled manually through WhatsApp, Google Forms, and spreadsheets, leading to duplicate entries, fake UIDs, and scheduling chaos.	Operations
SP-2	Match results, kill counts, placement points, and leaderboards are calculated manually from screenshots, causing delays, errors, disputes, and loss of competitive integrity.	Competition Integrity
SP-3	Live broadcast production (OBS overlays, stream graphics, real-time standings) is completely disconnected from tournament operations, requiring manual data transfer between separate teams and tools.	Broadcast & Production
SP-4	Room ID and password distribution for in-game lobbies is insecure, poorly timed, and managed through open chat channels, leading to leaks, unauthorized entries, and match delays.	Security & Logistics
SP-5	Players and teams have no centralized platform to track their tournament history, statistics, rankings, or upcoming match schedules, resulting in fragmented player identity and poor engagement.	Player Experience
SP-6	Organizers have no real-time visibility into tournament health — active matches, check-in status, stream viewership, revenue, or pending actions — forcing them to constantly switch between 5–8 different tools.	Organizer Visibility

2.3 Problem Scope

- **Geography:** India (primary), South Asia (secondary)
- **Game Titles:** BGMI, Free Fire MAX, PUBG Mobile, COD Mobile, and similar mobile battle royale/arcade titles
- **Tournament Scale:** 16–team local scrims to 256–team national–level championships
- **Frequency:** Daily scrims, weekly cups, monthly leagues, quarterly championships

3. PROBLEM CONTEXT & INDUSTRY BACKGROUND

3.1 Market Size & Growth

The Indian esports market is projected to reach **₹11,000 crore by 2027** (EY–FICCI report). Mobile gaming accounts for over **85% of India's gaming revenue**, with BGMI alone reporting over **100 million downloads** since its relaunch.

Key data points:

Metric	Estimate
Active mobile gamers in India	450M+
Competitive/esports–interested players	50–80M
Monthly BGMI tournaments (organized)	5,000–15,000
Average tournament participants	64–256 players
Average entry fee per team	₹50–₹500
Monthly prize pools distributed (informal)	₹2–5 crore
Esports content viewership (YouTube/Instagram)	500M+ hours/month

3.2 The Organizer Ecosystem

Tournaments are organized by a highly fragmented set of actors:

Organizer Type	% of Tournaments	Typical Scale	Tech Sophistication
Individual creators / YouTubers	~40%	16–64 teams	Very Low
College / University clubs	~20%	32–128 teams	Low
Gaming cafés / LAN centers	~15%	16–48 teams	Low–Medium
Independent esports orgs	~15%	64–256 teams	Medium
Established esports companies	~8%	128–500+ teams	Medium–High
Game publishers (official)	~2%	500+ teams	High

Critical observation: Over **75% of tournaments** are organized by individuals or small teams with **no technical infrastructure** and **no budget for custom software**. They operate entirely on free tools

(WhatsApp, Discord, Google Sheets, YouTube).

3.3 The Operational Reality

A typical weekend BGMI tournament with 64 teams (256 players) involves:

- **Pre-tournament:** 3–5 days of registration, verification, payment collection, and scheduling
- **Match day:** 6–10 hours of continuous operations across 6–12 matches
- **Post-tournament:** 2–4 hours of result compilation, dispute resolution, and prize distribution
- **Total human effort:** 40–80 person-hours per tournament
- **Tools used simultaneously:** 5–8 (WhatsApp, Discord, Google Sheets, YouTube Studio, OBS, payment apps, screenshot tools, timer apps)

4. TARGET USER SEGMENTS

4.1 Primary Segments

Segment	Description	Priority
S1: Independent Tournament Organizers	Individual creators, YouTubers, or small teams running weekly/monthly BGMI and Free Fire tournaments for their communities.	Critical
S2: Emerging Esports Organizations	Semi-professional esports orgs running branded leagues and cups with sponsor involvement and larger prize pools.	Critical
S3: Players & Team Captains	Competitive mobile gamers who participate in multiple tournaments across different organizers and need centralized tracking.	High
S4: Broadcast & Production Teams	Small production crews managing OBS streams, overlays, and commentary for live tournament broadcasts.	High

4.2 Secondary Segments

Segment	Description	Priority
S5: College Esports Clubs	Student-run organizations hosting inter-college or intra-college gaming competitions.	Medium
S6: Gaming Cafés & LAN Centers	Physical venues running local tournaments to drive foot traffic and community engagement.	Medium
S7: Sponsors & Brands	Companies looking to sponsor esports events and needing visibility into audience metrics and brand placement.	Medium
S8: Viewers & Fans	Audience members watching live tournament streams and wanting real-time standings and match information.	Low (initially)

5. DETAILED USER PERSONAS

Persona 1: "Rahul the Organizer"

Attribute	Detail
Name	Rahul Sharma
Age	23
Location	Indore, Madhya Pradesh
Occupation	YouTube content creator (45K subscribers) + freelance video editor
Tournament Frequency	2–3 tournaments per week
Typical Scale	32–64 teams per tournament
Entry Fee	₹100–₹200 per team
Prize Pool	₹5,000–₹15,000 per tournament
Tools Used	WhatsApp (3 groups), Google Sheets, YouTube Live, OBS, PhonePe for payments
Revenue	₹8,000–₹20,000/month from tournaments
Team Size	2 people (Rahul + 1 friend who helps with scores)

Daily Workflow:

1. Posts tournament announcement on Instagram and WhatsApp
2. Receives 80–120 registration messages on WhatsApp
3. Manually copies team names, UIDs, and payment screenshots into a Google Sheet
4. Verifies each UID by opening BGMI and searching the player (takes 2–3 hours)
5. Creates a match schedule in the same Google Sheet
6. On match day, creates in-game rooms and shares ID/password in a WhatsApp group
7. Watches the match on a second device while his friend takes screenshots of the results screen
8. Manually enters kills and placement into the spreadsheet after each match
9. Calculates the leaderboard using a formula he copied from another organizer
10. Posts the leaderboard screenshot on WhatsApp and Instagram Stories
11. Streams the final matches on YouTube with a basic OBS overlay showing team names
12. Announces winners and distributes prize money via UPI

Top 3 Frustrations:

1. "I spend more time managing registrations and verifying UIDs than actually running the tournament."
2. "Every tournament, at least 3–4 teams argue about the leaderboard because my friend entered the wrong kill count from the screenshot."
3. "I want my stream to look professional like BGIS or BMPS, but I can't afford a production team and updating OBS overlays manually during a live match is impossible for one person."

Persona 2: "Priya the Esports Org Manager"

Attribute	Detail
Name	Priya Nair
Age	27
Location	Bangalore, Karnataka
Occupation	Operations Manager at a mid-tier esports organization
Tournament Frequency	1–2 major tournaments per month + weekly scrims
Typical Scale	128–256 teams for majors, 32–48 for scrims
Entry Fee	₹200–₹500 per team
Prize Pool	₹50,000–₹2,00,000 per major
Tools Used	Discord server (custom bots), Google Sheets (advanced), YouTube, OBS, StreamElements, Razorpay, Notion
Revenue	₹1–3 lakh/month (sponsorships + entry fees)
Team Size	6–8 people (operations, referees, casters, OBS operator)

Workflow Pain Points:

- "We built custom Discord bots for registration, but they break constantly and can't handle the scoring logic for multi-round battle royale formats."*
- "Our biggest nightmare is the 20 minutes between a match ending and the next match starting. We have to verify results, update the leaderboard, reassign slots, release new room IDs, and update the stream overlay — all simultaneously."*
- "We lost a major sponsor last quarter because we couldn't provide real-time viewership data or brand impression metrics during the live broadcast."*

Persona 3: "Arjun the Team Captain"

Attribute	Detail
Name	Arjun Reddy
Age	20
Location	Hyderabad, Telangana
Occupation	College student (B.Tech 3rd year)
Team	"Hydra Esports" (4 players + 1 substitute)
Tournaments Played	8–12 per month across different organizers
Games	BGMI (primary), Free Fire MAX (secondary)
Tools Used	WhatsApp, Discord, Instagram DMs, BGMI in-game

Frustrations:

- 1. "I have to register separately for every tournament. Every organizer has a different form, different payment method, and different rules. I've been disqualified twice because of a UID typo I made while filling a Google Form on my phone."
- 2. "There's no single place where I can see my team's overall record, win rate, or ranking across all the tournaments we've played. My stats exist only in scattered screenshots."
- 3. "Half the time, the room ID arrives late on WhatsApp, or it gets leaked to people who aren't in our slot. We've missed match starts because of this."

Persona 4: "Vikram the Stream Producer"

Attribute	Detail
Name	Vikram Desai
Age	25
Location	Mumbai, Maharashtra
Occupation	Freelance esports broadcast producer
Clients	3–4 esports orgs and tournament organizers
Tools Used	OBS Studio, Streamlabs, Adobe After Effects, Photoshop, YouTube Studio
Revenue	₹30,000–₹80,000/month

Frustrations:

- 1. "Every tournament wants custom overlays, but the data feeding those overlays comes from a Google Sheet that someone updates manually. By the time I get the updated standings, the match is already halfway through."
- 2. "I need a browser source that automatically pulls live scores and displays them on stream. Right now, I have a person whose only job is to type scores into a text file that OBS reads. It's absurd."
- 3. "If the tournament platform and the broadcast system were connected, I could produce a BGIS-quality stream with a team of two instead of a team of six."

6. PAIN POINT MAPPING BY USER SEGMENT

6.1 Pain Point Matrix

Pain Point	S1 (Indie Organizer)	S2 (Esports Org)	S3 (Player)	S4 (Producer)	Severity
Manual registration & verification	●	●	●	●	Critical
UID fraud & duplicate entries	●	●	●	●	Critical

Pain Point	S1 (Indie Organizer)	S2 (Esports Org)	S3 (Player)	S4 (Producer)	Severity
Room ID leaks & lobby chaos	●	●	●	●	Critical
Manual score entry from screenshots	●	●	●	●	Critical
Delayed/incorrect leaderboards	●	●	●	●	Critical
Disconnected broadcast overlays	●	●	●	●	High
No centralized player profile/stats	●	●	●	●	High
Multi-tool context switching	●	●	●	●	High
No real-time tournament dashboard	●	●	●	●	High
Payment collection & reconciliation	●	●	●	●	Medium
Dispute resolution & audit trail	●	●	●	●	Medium
Sponsor visibility & analytics	●	●	●	●	Medium
Player check-in management	●	●	●	●	High
Schedule communication to players	●	●	●	●	High

Legend: ● Severe | ● Moderate | ● Minimal/Not Applicable

7. CURRENT WORKFLOW ANALYSIS (AS-IS STATE)

7.1 Pre-Tournament Phase (3–7 Days Before Event)

```
Day -7: Organizer creates tournament poster in Canva
↓
Day -6: Shares poster on Instagram, WhatsApp status, Discord
↓
Day -5: Players DM organizer or fill Google Form
↓
Day -4: Organizer receives 100+ messages with:
  - Team name
  - 4 player UIDs
  - Payment screenshot (PhonePe/GPay)
↓
Day -3: Organizer manually enters data into Google Sheet
```

- Cross-checks UUIDs in-game (opens BGMI, searches each UUID)
- Identifies 10-15 invalid/duplicate UUIDs
- Messages teams for corrections (back-and-forth on WhatsApp)

↓

Day -2: Finalizes team list (e.g., 64 teams confirmed)

- Creates match schedule (Group A: 16 teams, Group B: 16 teams...)
- Shares schedule as image on WhatsApp

↓

Day -1: Players ask 50+ questions:

- "Match kab hai?"
- "Room ID kab milega?"
- "Humara group kaunsa hai?"
- "Substitute allowed hai kya?"

Organizer answers individually.

Time spent: 15–25 hours **Error rate:** 8–15% of entries have at least one issue **Tools used:** WhatsApp, Instagram, Google Forms, Google Sheets, BGMI app, PhonePe

7.2 Match Day Phase (Event Day)

10:00 AM: Organizer creates WhatsApp group for Match Day

↓

10:30 AM: Announces "Check-in open" – teams must reply "Present"

↓

11:00 AM: Manually counts check-ins from 200+ messages

- 14 teams haven't checked in
- Organizer calls/messages them individually

↓

11:30 AM: Match 1 preparation

- Creates in-game custom room
- Copies Room ID and Password
- Posts in WhatsApp group
- Problem: ALL 64 teams see the ID, not just the 16 playing
- Unauthorized players try to join
- Organizer kicks wrong players, wastes 10-15 minutes

↓

12:00 PM: Match 1 starts (finally)

↓

12:35 PM: Match 1 ends

- Organizer's friend takes screenshot of results screen
- Screenshot is blurry / partially cut off
- They argue about whether Team X had 7 or 8 kills

↓

12:45 PM: Manual data entry into Google Sheet

- 16 teams × (placement + kills) = 32 data points
- Formula calculates points
- Leaderboard updated

↓

12:55 PM: Leaderboard screenshot shared on WhatsApp

- 3 teams immediately dispute results
- "We had 9 kills, not 7!"
- Organizer checks screenshot again, realizes error
- Corrects sheet, re-shares screenshot

↓

```
1:10 PM: Match 2 preparation begins
    - Same room ID chaos repeats
    - Schedule is now 25 minutes behind
    ↓
[REPEAT 6-12 TIMES]
    ↓
9:00 PM: Final match ends
    ↓
9:30 PM: Final leaderboard compiled
    ↓
10:00 PM: Winners announced on stream
    ↓
10:30 PM: Prize money sent via UPI
    - 2 teams claim they were shortchanged
    - Organizer spends 30 minutes resolving
```

Time spent: 10–14 hours continuous **Stress level:** Extremely high **Errors per tournament:** 5–15 scoring errors, 2–5 disputes **Schedule delay:** 30–90 minutes behind plan (typical)

7.3 Post-Tournament Phase (1–2 Days After)

```
Day +1: Organizer compiles final statistics
    - Top killers
    - Most chicken dinners
    - Team rankings
    ↓
Day +1: Posts results on Instagram and YouTube
    ↓
Day +2: Handles remaining disputes
    ↓
Day +2: Sends feedback form (optional, rarely done)
    ↓
Day +3: Starts planning next tournament
    - Copies the same Google Sheet
    - Deletes old data
    - Starts over
```

Time spent: 3–6 hours **Data retention:** Almost none — historical data is lost or buried in old sheets

8. PROBLEM SEVERITY & FREQUENCY MATRIX

Problem	Frequency (per tournament)	Severity (1–10)	Affected Users	Cumulative Impact
Manual registration processing	1× (pre-event)	8	Organizer	15–25 hrs wasted
UID verification	1× per player	7	Organizer	2–4 hrs wasted

Problem	Frequency (per tournament)	Severity (1-10)	Affected Users	Cumulative Impact
Room ID leakage	1× per match	9	Organizer, Players	10-15 min delay per match
Manual score entry	1× per match	9	Organizer	10-15 min per match
Leaderboard errors	2-5× per tournament	10	Organizer, Players	Disputes, trust loss
Schedule delays	1× per tournament	7	All	30-90 min cumulative
Player communication overload	Continuous	6	Organizer, Players	Constant distraction
Disconnected broadcast data	1× per match	8	Producer, Viewers	Unprofessional stream
No player stats persistence	Permanent	6	Players	No career progression
Payment reconciliation	1× per tournament	5	Organizer	1-2 hrs wasted

9. EXISTING SOLUTIONS & GAP ANALYSIS

9.1 Current Solutions Landscape

Solution	Type	What It Does	What It Doesn't Do
WhatsApp + Google Sheets	Manual	Communication, basic data entry	Automation, real-time updates, security, broadcasting
Discord + Custom Bots	Semi-automated	Registration, role management, basic commands	Battle royale scoring, live leaderboards, OBS integration, room security
Xtallet	Platform	Tournament listing, registration, brackets	Live match operations, real-time scoring, broadcast overlays, room management
Battlefy	Platform	Brackets, scheduling, team management	Battle royale-specific scoring, Indian payment integration, OBS overlays, room ID management
Toornament	Platform	Tournament structure, brackets, results	Live operations, real-time updates, broadcast integration, Indian market features
Challonge	Platform	Simple bracket generation	Battle royale format, live scoring, streaming, Indian ecosystem

Solution	Type	What It Does	What It Doesn't Do
Custom Google Sheets + Apps Script	DIY	Semi-automated scoring and leaderboards	Reliability, real-time updates, multi-user access, broadcast integration

9.2 Gap Analysis

Required Capability	WhatsApp/Sheets	Discord Bots	Xtallet	Battlefy	Gap (Unmet Need)
Battle royale registration	●	●	●	●	Team verification + UID validation
Secure room ID distribution	●	●	●	●	Timed, slot-specific room credential release
Live match scoring	●	●	●	●	Real-time kill + placement entry during match
Real-time leaderboard	●	●	●	●	WebSocket-driven live standings
OBS overlay integration	●	●	●	●	Browser-source overlays fed by live data
Player check-in system	●	●	●	●	Automated check-in with deadline enforcement
Multi-match scheduling	●	●	●	●	Auto-scheduling with group rotation
Indian payment integration	●	●	●	●	UPI/Razorpay with auto-reconciliation
Result audit trail	●	●	●	●	Change log with evidence attachment
Broadcast command center	●	●	●	●	Unified stream + score + overlay control
Player career profiles	●	●	●	●	Cross-tournament stats and rankings
Multi-organizer SaaS	●	●	●	●	White-label platform for orgs

9.3 Key Finding

No existing solution addresses the intersection of live match operations, real-time scoring, and broadcast production for battle royale tournaments in the Indian mobile esports context.

The gap is not in tournament *listing* or *registration*. The gap is in **live execution** — the 6–10 hour window on match day where everything happens simultaneously and manually.

10. EVIDENCE OF PROBLEM EXISTENCE

10.1 Direct Evidence

Source	Evidence
BGMI Official Rulebook	The 40+ page competition rules document details extensive procedures for match restarts, technical pauses, observer issues, and disqualification scenarios — evidence that even official tournaments struggle with operational complexity.
Xtallet Platform	Xtallet explicitly markets itself as solving the "spreadsheets and WhatsApp" problem for BGMI tournament organizers, confirming this is a recognized pain point in the Indian market.
MS Productions (BGIS 2026)	India's largest esports production company documents the massive coordination effort required between observers, directors, graphics operators, and technical teams for a single BGIS broadcast — confirming that production complexity scales dramatically.
Reddit r/BGMI Community	Active discussions about tournament format fairness, scoring system inconsistencies, and organizer reliability — confirming player frustration with current tournament quality.
YouTube Comments on Tournament Streams	Recurring viewer complaints about "wrong leaderboard," "delayed results," and "unprofessional stream" on mid-tier tournament broadcasts.

10.2 Indirect Evidence

Indicator	What It Suggests
5,000–15,000 monthly tournaments with no dominant software platform	Market is underserved; no tool has achieved product-market fit
Proliferation of "tournament management" Discord bots	Organizers are actively trying to automate but lack proper tools
High organizer burnout and turnover	Many organizers quit after 3–6 months due to operational exhaustion
Growing demand for "esports production services"	Organizers are outsourcing what they can't manage internally
Frequent tournament disputes on social media	Lack of transparent, auditable scoring systems

11. PROBLEM PRIORITIZATION FRAMEWORK

Using the **ICE Framework** (Impact × Confidence × Ease) and **RICE Framework** (Reach × Impact × Confidence ÷ Effort):

11.1 ICE Scoring

Problem	Impact (1-10)	Confidence (1-10)	Ease (1-10)	ICE Score
P1: Manual tournament operations	10	9	6	540
P2: Results & leaderboard errors	9	9	5	405
P3: Disconnected broadcast production	8	8	4	256
P4: Room ID security	7	8	8	448
P5: No player profiles	6	7	7	294
P6: No organizer dashboard	8	8	6	384

11.2 Prioritized Problem Order

Priority	Problem	Rationale
 #1	Manual Tournament Operations	Highest impact, highest confidence, affects every organizer every tournament
 #2	Results & Leaderboard Integrity	Directly affects competitive trust; most common source of disputes
 #3	Room ID Security & Distribution	High-impact, relatively easy to solve, immediate value
 4	Organizer Real-Time Dashboard	Enables all other improvements; foundational feature
 5	Disconnected Broadcast Production	High value but requires P1 and P2 to be solved first
 6	Player Profiles & Statistics	Important for retention but not the acute pain

12. VALIDATION METHODS & FINDINGS

12.1 Validation Approach

Method	Status	Sample Size	Key Finding
Competitor Analysis	✅ Complete	7 platforms	No platform solves live operations + broadcast
Community Observation	✅ Complete	50+ Discord servers, 20+ WhatsApp groups	Manual workflows are universal
Content Analysis	✅ Complete	100+ YouTube tournament streams	60%+ show visible operational issues

Method	Status	Sample Size	Key Finding
Rulebook Analysis	✅ Complete	BGMI official rules, 3 org rulebooks	Operational complexity is formally acknowledged
User Interviews	🟡 Planned	Target: 10 organizers, 10 players	To be conducted in Phase 1
Survey	🟡 Planned	Target: 100+ respondents	To be conducted in Phase 1
Prototype Testing	🔴 Not Started	—	After MVP development

12.2 Validation Confidence Level

Aspect	Confidence	Justification
Problem exists	🟢 95%	Overwhelming direct and indirect evidence
Problem is painful	🟢 90%	High frequency of complaints, disputes, and organizer burnout
Problem is widespread	🟢 90%	Affects 75%+ of the organizer ecosystem
Users will pay to solve it	🟡 70%	Willingness to pay needs further validation; entry fee model suggests budget exists
Current solutions are inadequate	🟢 95%	Gap analysis confirms no solution covers the full workflow
Timing is right	🟢 85%	Market is growing, professionalization is increasing, no dominant platform exists

13. RISK OF PROBLEM NON-EXISTENCE

13.1 Counterarguments & Rebuttals

Counterargument	Rebuttal
<i>"Organizers are fine with WhatsApp and Sheets."</i>	They tolerate it because there's no alternative, not because it works well. Burnout and error rates prove the system is broken.
<i>"Xtallet and Battlefy already solve this."</i>	They solve registration and brackets. They do not solve live match operations, real-time scoring, room management, or broadcast integration for battle royale formats.
<i>"The market is too small."</i>	5,000–15,000 tournaments/month × ₹5,000–₹50,000 average revenue = ₹2.5–75 crore monthly market. Even capturing 1% is significant.
<i>"Players don't care about infrastructure."</i>	Players care deeply about fair results, timely matches, and accurate leaderboards. Infrastructure failures directly affect their experience.

Counterargument	Rebuttal
"Official tournaments (BGIS, BMPS) set the standard."	Official tournaments have 50+ person production teams and custom-built internal tools. The 99% of organizers running smaller events have none of this.

13.2 Risk Level

Risk	Probability	Impact	Mitigation
Problem is overstated	Low (10%)	High	Conduct user interviews before building
Users won't switch from free tools	Medium (30%)	High	Offer freemium model; demonstrate time savings
Game popularity declines	Low (15%)	High	Build game-agnostic platform; support multiple titles
Large competitor enters market	Medium (25%)	Medium	Focus on Indian market specifics and battle royale niche

14. PROBLEM-SOLUTION FIT HYPOTHESIS

14.1 Core Hypothesis

If we build an integrated platform that automates tournament registration, secures room ID distribution, enables real-time scoring and leaderboards, and connects live data to broadcast overlays,

Then tournament organizers will reduce their operational time by 60–70%, eliminate 90% of scoring errors, and produce professional-quality streams with 50% fewer staff,

Because the current manual workflow is the single largest bottleneck preventing tournament quality and scale.

14.2 Success Metrics (to validate post-MVP)

Metric	Current Baseline	Target
Time to set up a 64-team tournament	15–25 hours	2–4 hours
Scoring errors per tournament	5–15	0–1
Schedule delay on match day	30–90 minutes	0–10 minutes
Staff required for live operations	4–8 people	1–2 people
Time from match end to leaderboard update	10–20 minutes	< 30 seconds
Organizer NPS	Estimated 20–30	Target 60+

15. OPEN QUESTIONS & NEXT STEPS

15.1 Open Questions

#	Question	Priority	Method to Answer
1	What is the maximum amount organizers are willing to pay per tournament?	● High	User interviews + pricing survey
2	Will organizers trust a platform with payment collection and prize distribution?	● High	User interviews
3	How important is mobile-first design vs. desktop dashboard?	● Medium	User behavior analysis
4	Will players adopt a new platform, or do they prefer staying on WhatsApp?	● Medium	Player survey
5	Is there demand for a multi-organizer SaaS model vs. single-organizer tool?	● Medium	Esports org interviews
6	How do we handle game API limitations (BGMI/Free Fire have no public match data API)?	● High	Technical research
7	What is the minimum viable feature set that would cause an organizer to switch?	● High	MVP testing

15.2 Immediate Next Steps

Step	Action	Timeline	Owner
1	Conduct 10 user interviews with tournament organizers	Week 1–2	Product
2	Conduct 10 user interviews with competitive players	Week 1–2	Product
3	Run a survey targeting 100+ organizers via Discord/WhatsApp	Week 2–3	Product
4	Analyze 20 live tournament streams for operational failure points	Week 2	Research
5	Create a clickable prototype of the Command Center dashboard	Week 3–4	Design
6	Validate prototype with 5 organizers	Week 4–5	Product
7	Finalize MVP scope based on validation findings	Week 5–6	Product + Engineering
